- **Screenshot** of each member's contributions throughout the semester from Github:

Sep 13, 2015 – Dec 8, 2015

Contributions to master, excluding merge commits

Contributions: Commits ▾

Note: Sigrunn Sky Committed using the Nicolas9101 account as well since it was the account logged into our cloud 9 development environment.

- **Deployment:** https://ide.c9.io/nicolas9101/csci_3308_project_netflix Select index.html and then select run or Preview and then live-preview to get the site up and running. We could only share the deployment environment with read/write permissions to Liz's email since her email was the only one with a cloud 9 account already made, the other Ta's emails could not be invited to have access to the project because they do not have cloud 9 accounts yet and cloud 9 does not let you give email accounts access to workspaces if they do not yet have an account registered with cloud 9. But once the index.html file is already being "run" on cloud 9 the website is then hosted live on the web through cloud 9 at the following link:

<https://csci-3308-project-netflix-nicolas9101.c9.io>

Note: At one point during development C9 seemed to stop hosting the site live at that above URL. This may have been a fluke or the result of development changes but it should be available at the above URL unless it has stopped running for some strange reason due to C9.
